HADRIAN

Know your attack surface.
Pentest it continuously.

Autonomous agents map what you expose, attack it the way real adversaries would, and hand your team proof, not noise.

10 November 2026 · Rogier Fischer, CEO and co-founder

The attacker is no longer one person.
It is agents, around the clock. A zero-day is weaponized in minutes.

What do we have on the internet, and is any of it exploitable today?

Atlas is always on.
PHP2Shell: matched and tested within hours.

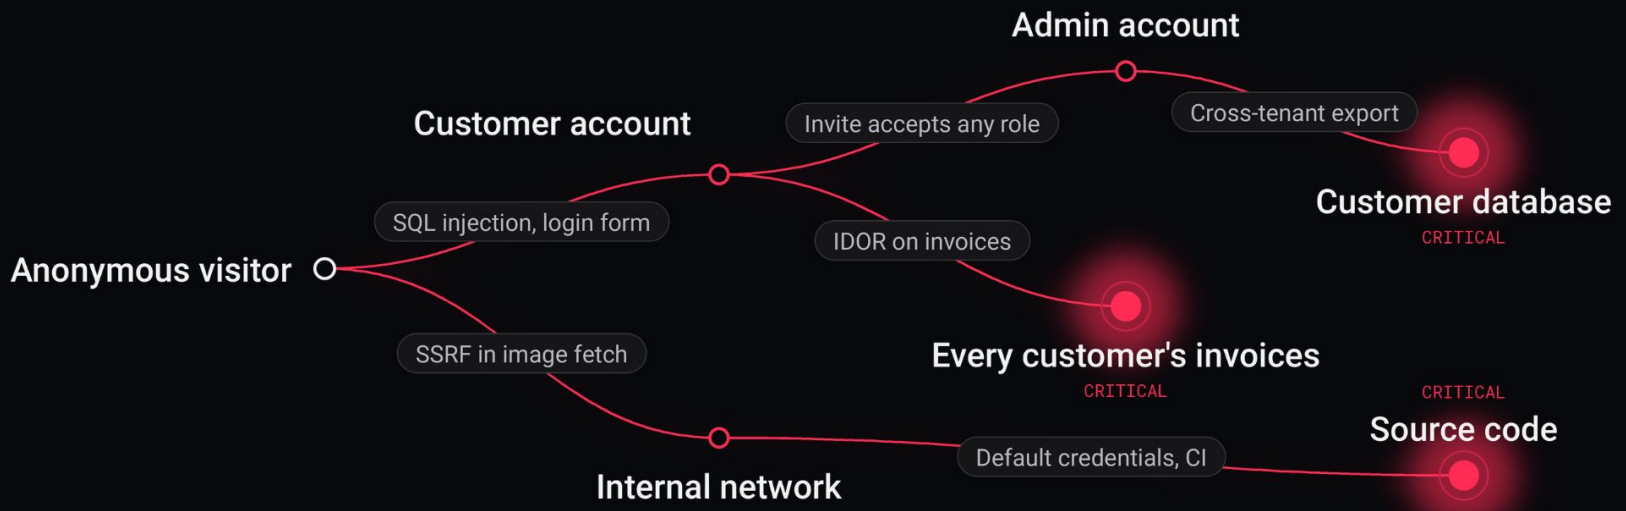
PHP2Shell had a CVE.

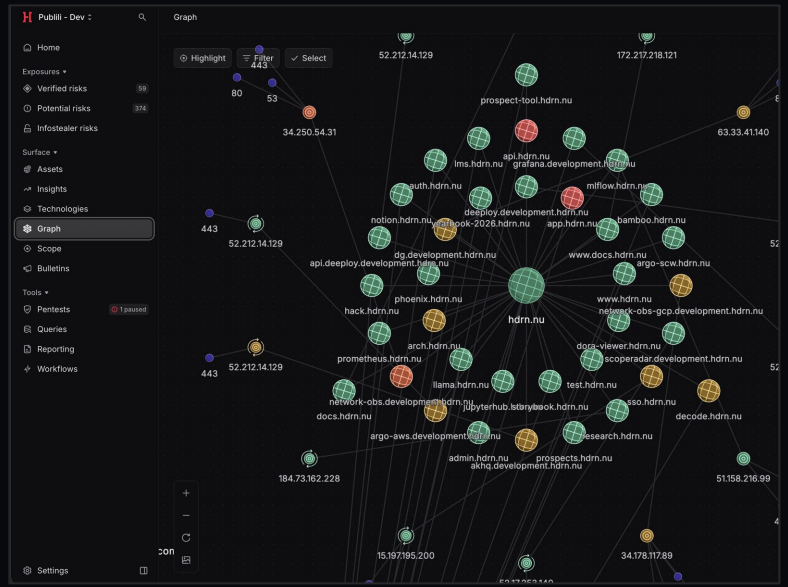
The bugs in your own apps might not.

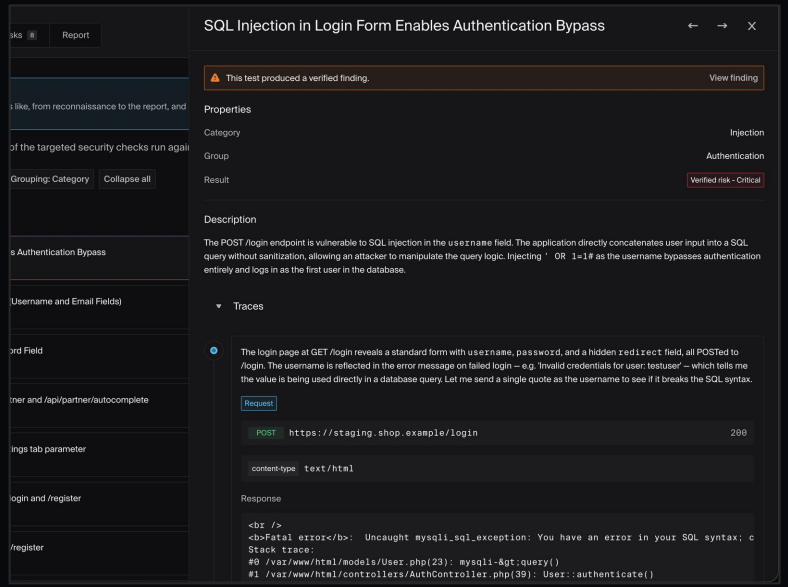
If someone went after your app, how far would they actually get?

Nova: an agentic pentest, powered by AI.
Beyond CVEs: the attack paths through your app.



One platform. Breadth and depth.





ATLAS Continuous external exposure management

Every asset you expose, validated continuously

NOVA An agentic pentest, powered by AI

AI hacker agents, step by step, with the evidence.
