

Securing the *Workforce Edge*

Russ Spitler
Co-founder & CEO

15+ years building security products at AlienVault (AT&T) and Fortify (HPE)

Jaime Blasco
Co-founder & CTO

World-renowned security researcher and former head of AT&T Alien Labs

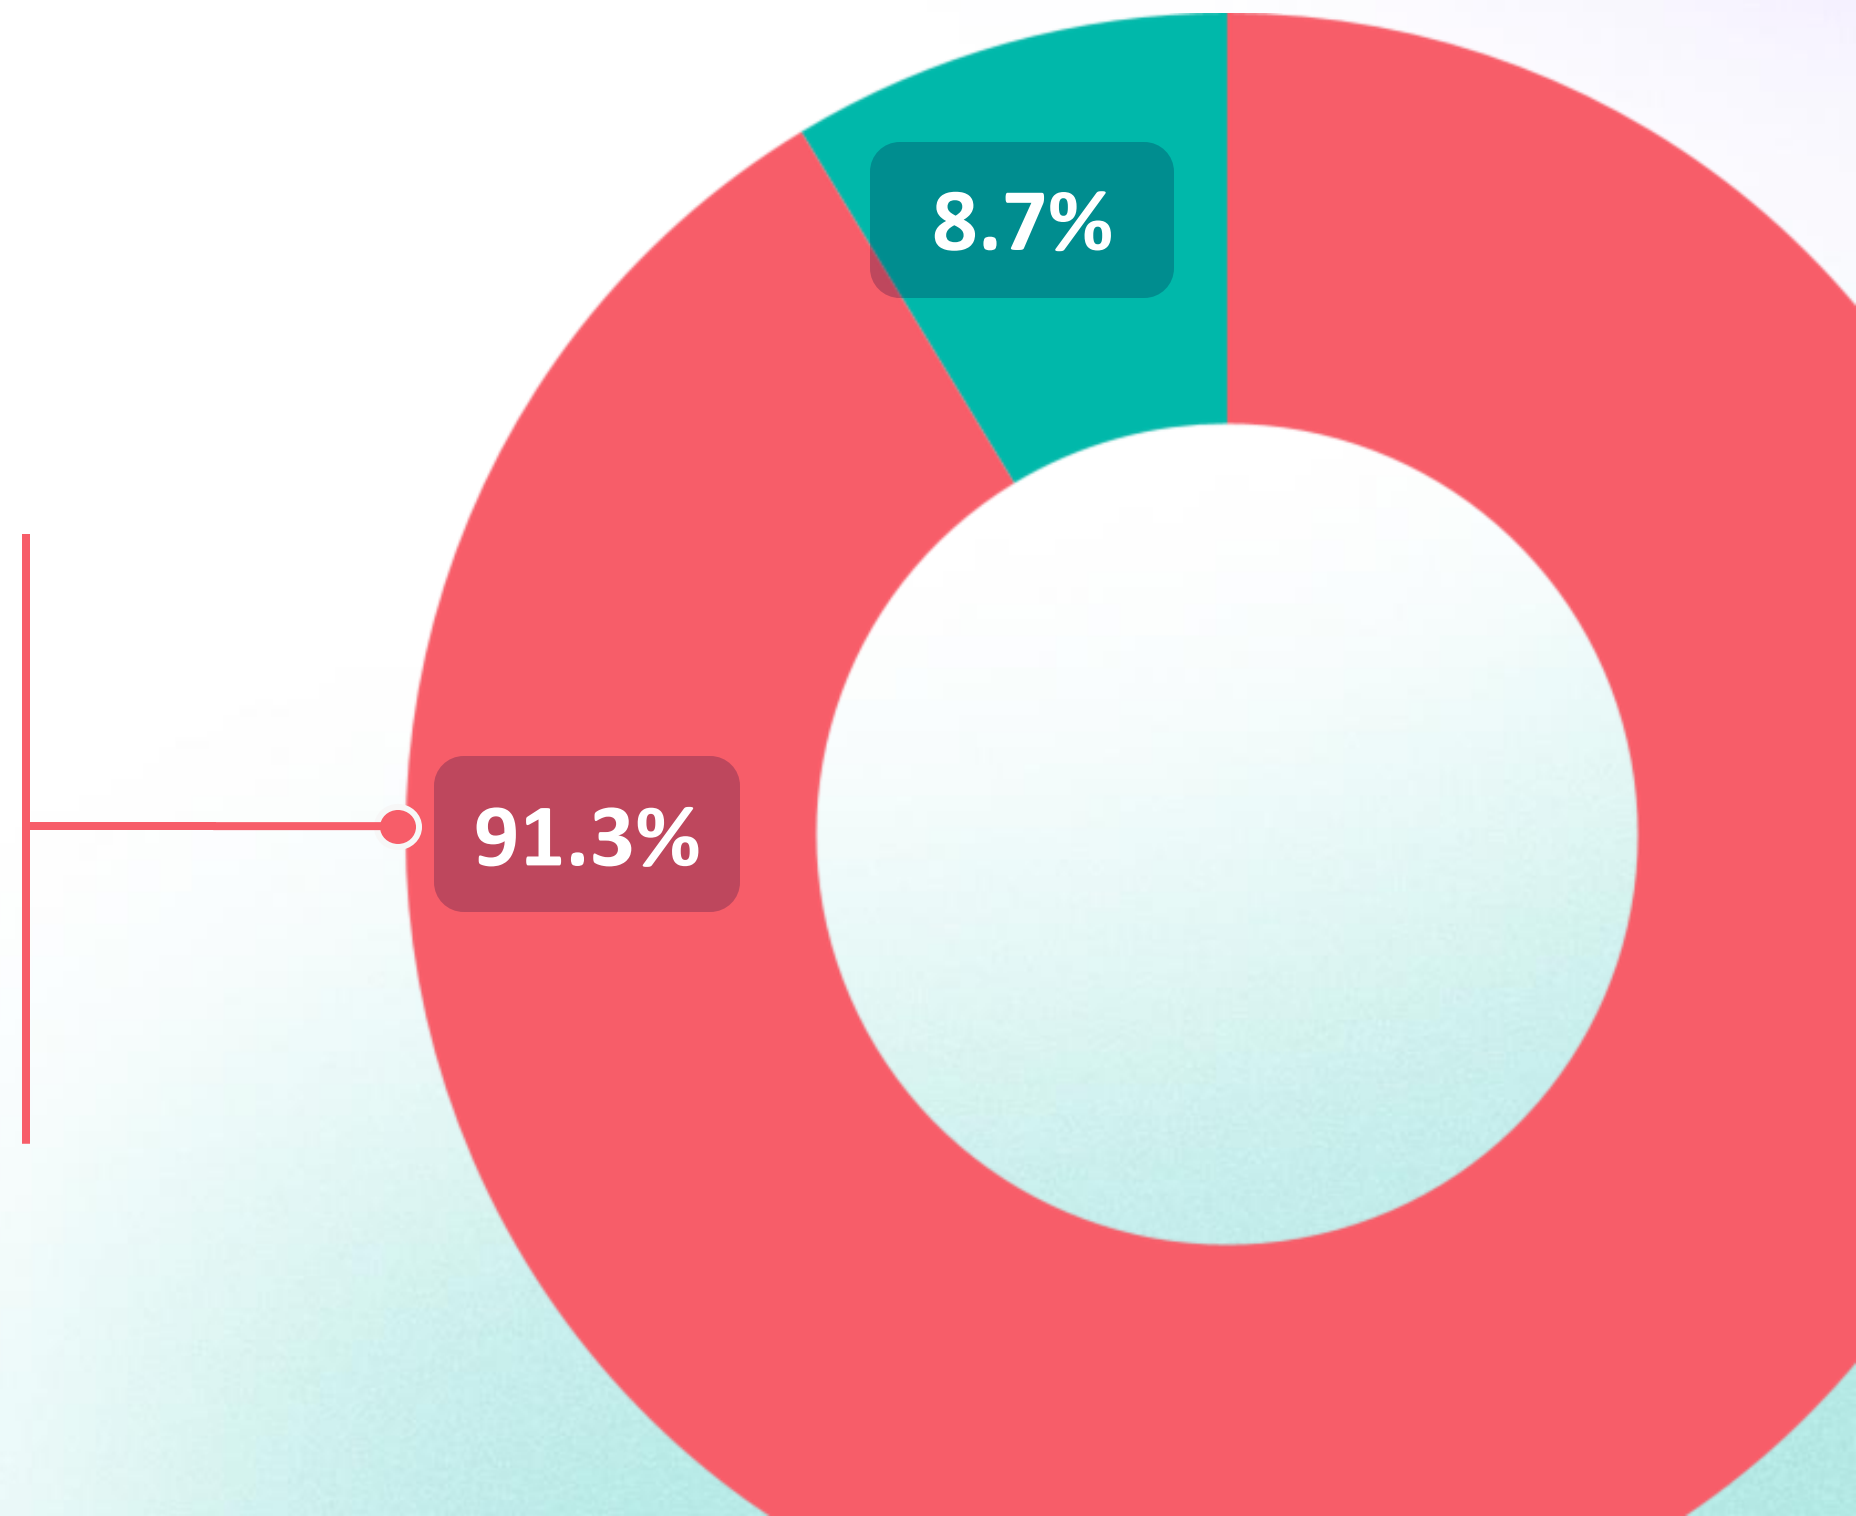

AT&T Cybersecurity

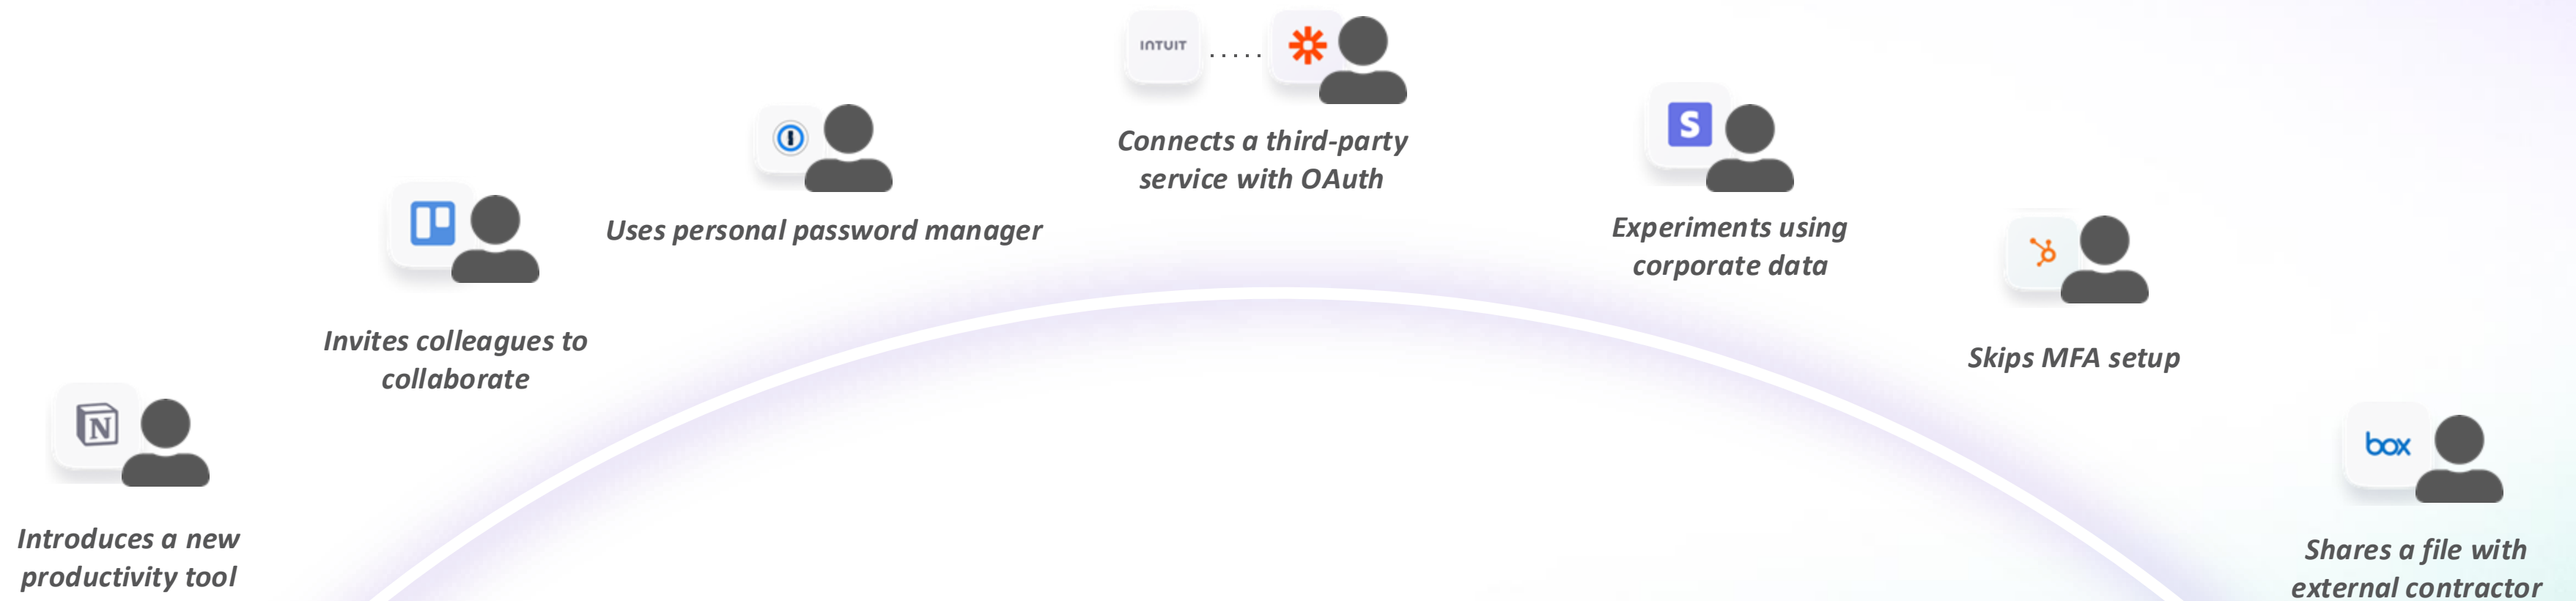

Example Customers:

**Over 90% of all apps
are adopted *outside*
of IT.**

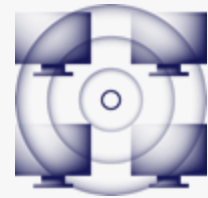

Risk is created at the Workforce Edge™

**Without the right visibility and controls in place,
risk and sprawl run wild at this edge.**

Traditional approaches aren't cutting it anymore.

IT service request portals...

...assume that work will wait.

Network-based controls

...lack visibility and context.

API-based integrations (SSPM)

...require prior knowledge & access.

Organizations need a new approach to protect and govern all apps, identities, and data across thousands of clouds.

What if **security** was created at the Workforce Edge?
